Enpass is blurry or having visual artifacts on Windows. How to fix?

Sometimes, Enpass opens with a blank screen due to incompatible graphics driver. We can fix it by disabling graphic driver support for Enpass. You need to add two environment variable `QT_OPENGL=software` and `QSG_RENDER_LOOP=basic` . To add follow these steps.

1. Search for `Environment variable` in search next to startup button.
2. Open `Edit environment variable for your account` .
3. Click `New` under User variables.
4. Enter `QT_OPENGL` as Variable name
5. Enter `software` as Variable value and press ok.
6. Click `New` again.
7. Enter `QSG_RENDER_LOOP` as Variable name
8. Enter `basic` as Variable value and press ok.
9. Press OK and close Environment variables window.
10. Restart Enpass.
